

Messung der Wärmeleitfähigkeit von Thermal Interface Materials (TIM)

Dr. Heinz Renner

LINSEIS Messgeräte GmbH

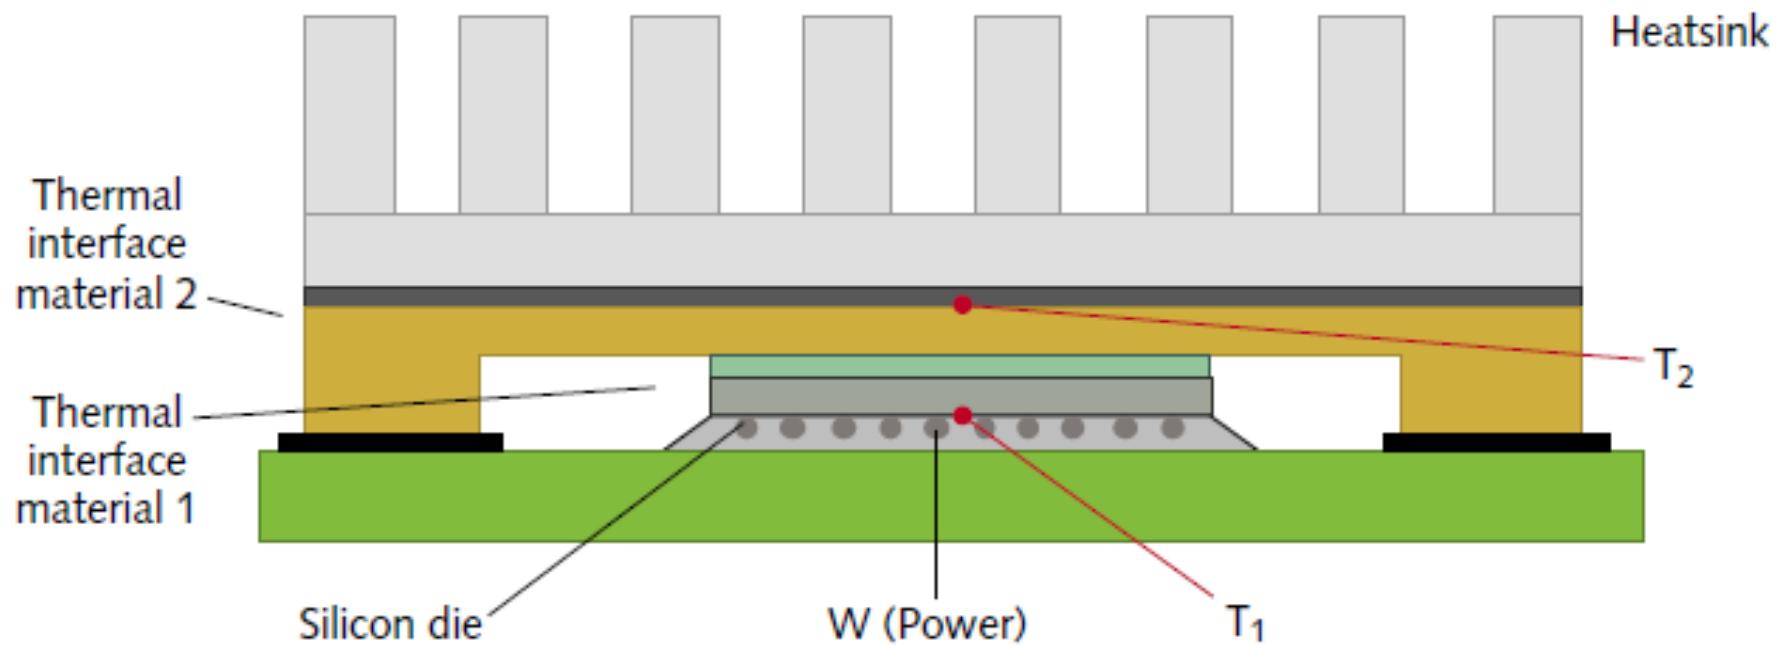

h.renner@linseis.de

Thermal Interface Materials (TIM)

- Usage in Power Electronics
- Thermal Pastes, Greases, Pads etc.
- Thermal Conductivity AND Contact Resistance important
- Standardized Measurement Method ASTM D5470-12

Typical CPU Architecture

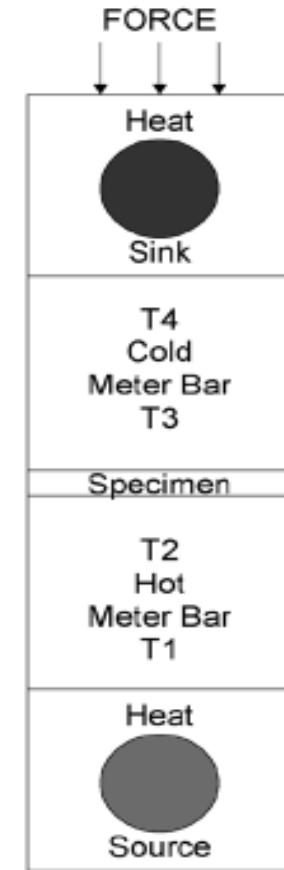

ASTM D5470-12

Standard Test Method for Thermal Transmission Properties of Thermally Conductive Electrical Insulation Materials

Instrument According ASTM D5470-12

- Two meter bars
 - (At least) two temperature sensors each
 - One heated one cooled (temperature stability ± 0.2 K)
 - 5 μm parallelity, Ra 0.4 μm
- Contact force necessary
- Isolation or guard heater for the meter bars are not necessary

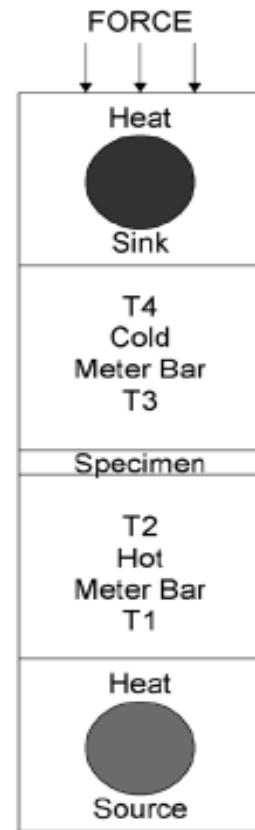

Calculations according ASTM D5470-12

Calculation of thermal impedance

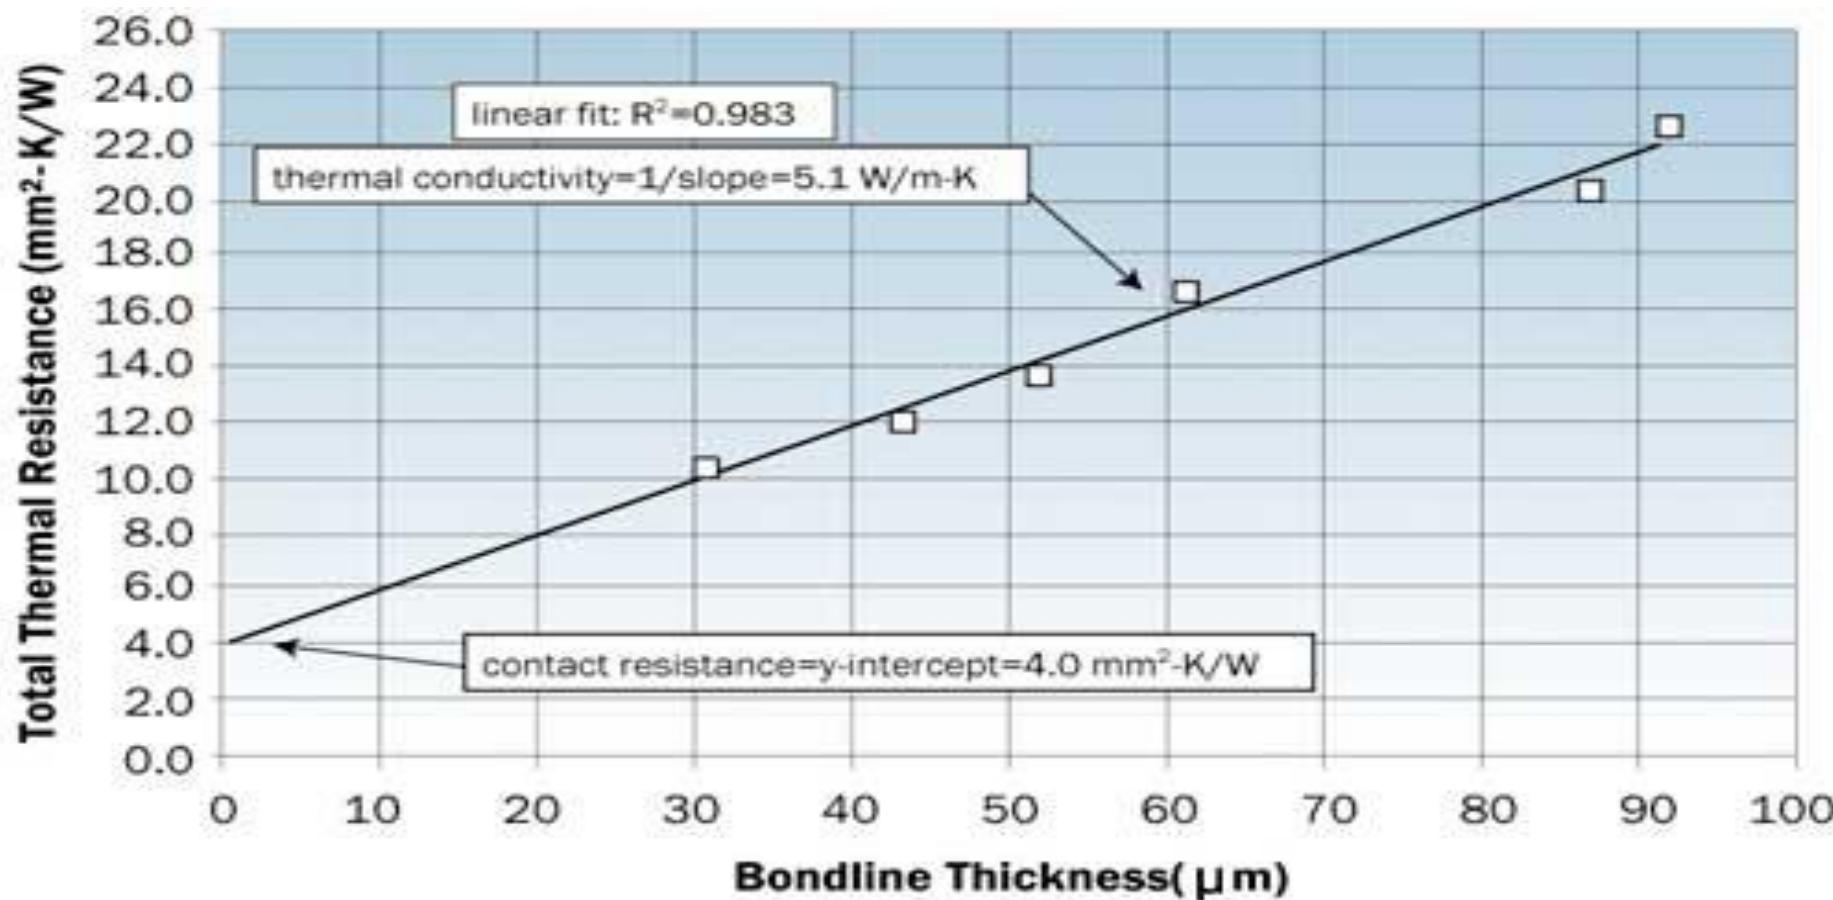

$$\theta = \frac{A}{\Phi} * (T_H - T_C) \quad [\frac{K*m^2}{W}]$$

$$\begin{aligned}\Phi_{12} &= \frac{\lambda_{12} * A}{d} * (T_1 - T_2) \\ \Phi_{34} &= \frac{\lambda_{34} * A}{d} * (T_3 - T_4) \\ \Phi &= \frac{\Phi_{12} + \Phi_{34}}{2}\end{aligned}$$

- Φ_{12} Heat flux hot meter bar[W]
- Φ_{34} Heat flux cold meter bar [W]
- Φ Heat flux specimen [W]
- λ_{12} thermal conductivity hot meter bar $[\frac{W}{m*K}]$
- λ_{34} thermal conductivity cold meter bar $[\frac{W}{m*K}]$
- A contact area of meter bar $[m^2]$

Evaluations according ASTM D5470-12

Linseis Instrument Setup

Electromechanic actuator
contact force up to 2.5 kN
Pressure up to 1 MPa to 5 MPa

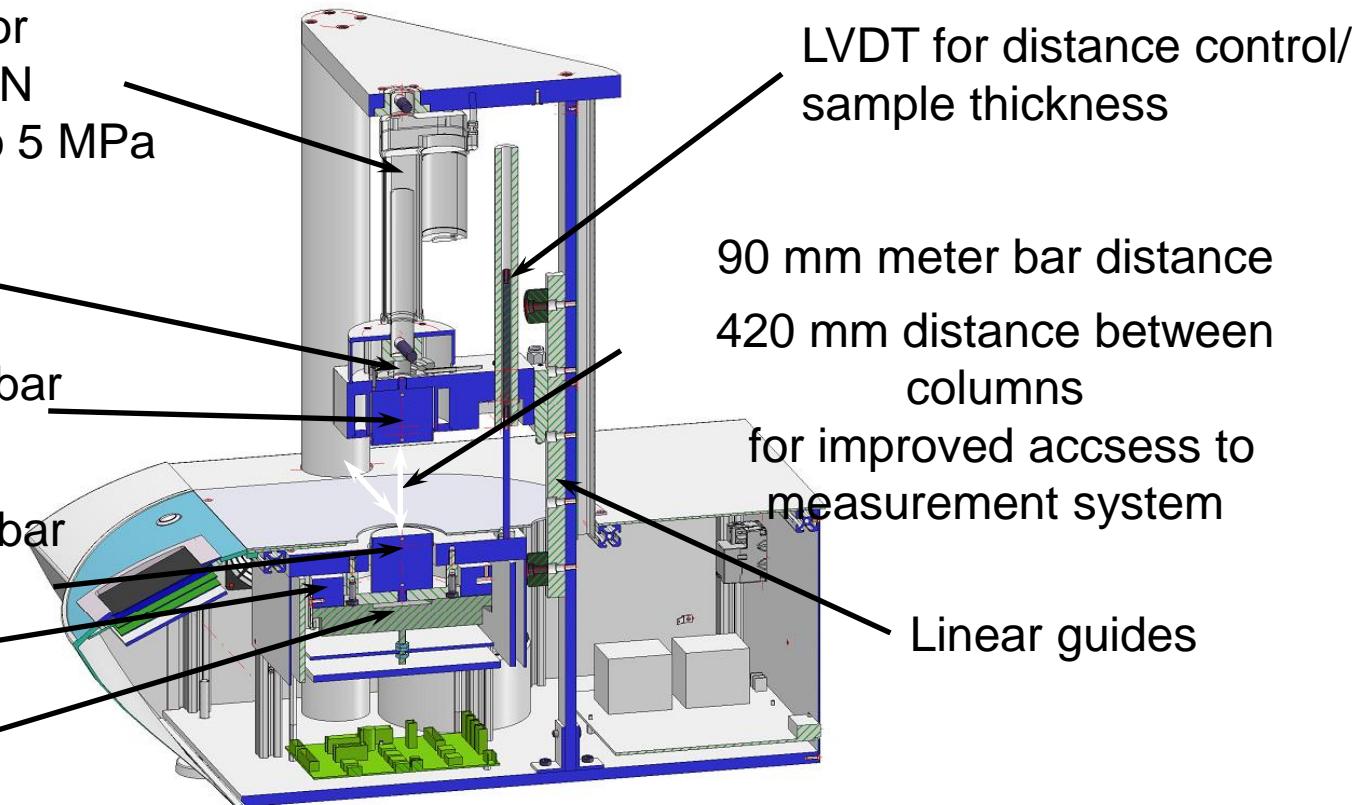

Load cell for
contact force control

Cooled heat flow meter bar
(easy exchangeable)

Heated heat flow meter bar
(easy exchangeable)

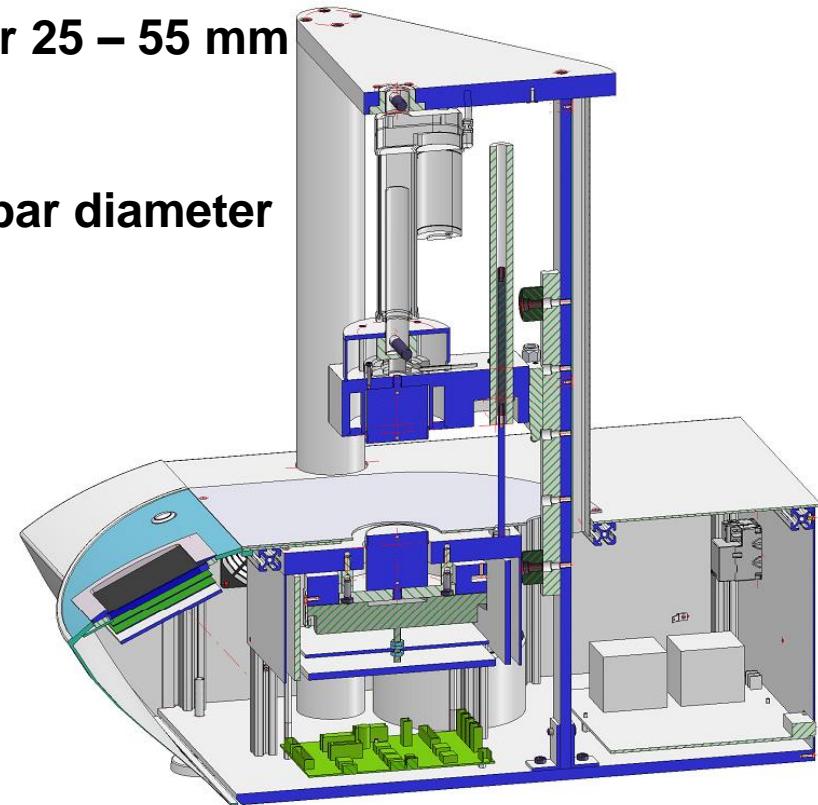

Guard heater

Two zone hotplate

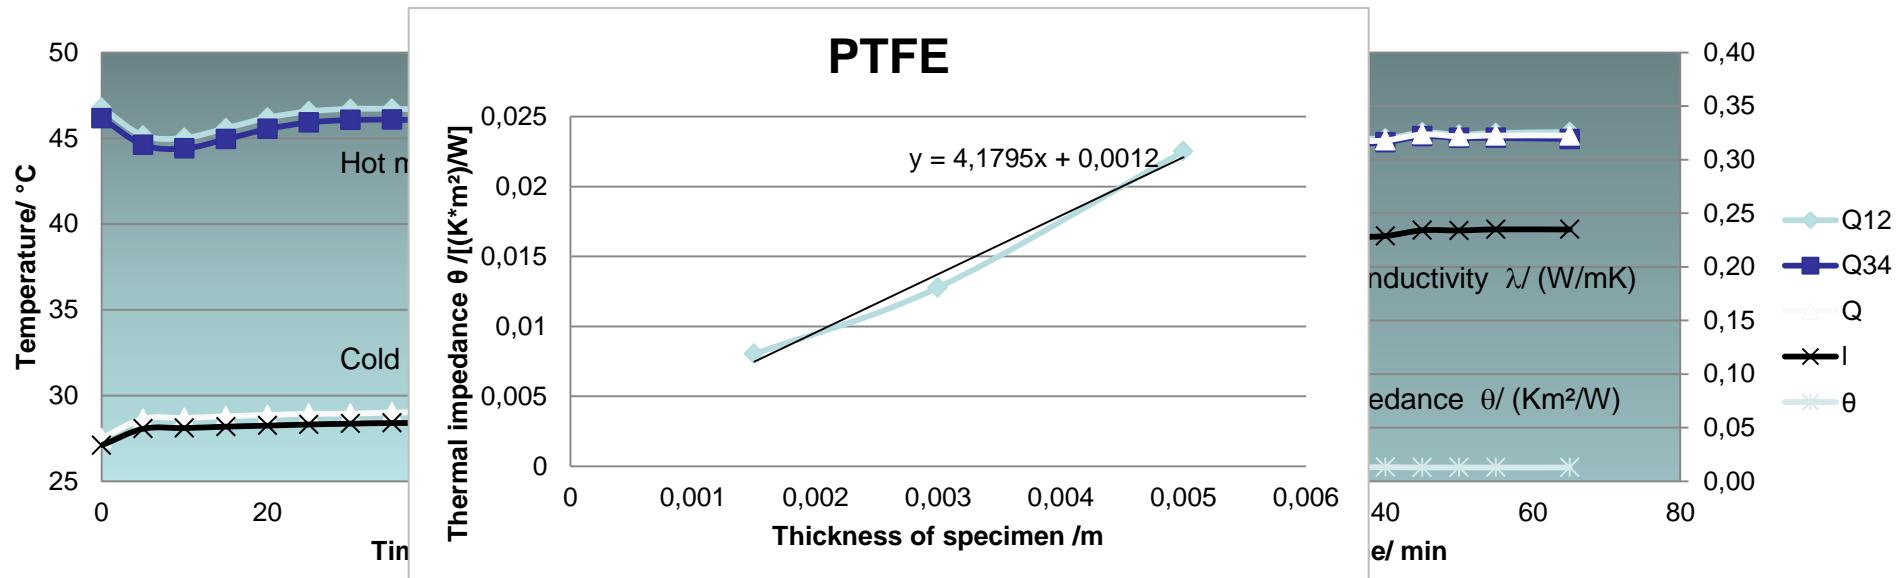

Linseis Specifications

- **Meter bars:**
 - Easy exchangeable meter bars diameter 25 – 55 mm
 - Guard heater and isolated meter bars
- **Contact force up to 2.5 kN**
 - pressure 1-5 MPa depending on meter bar diameter
 - Contact force accuracy 1%
- **LVDT for distance control accuracy 0.25%**
- **Temperature RT to 200 °C**
- **Sample thickness up to 90 mm**

Measurement of a PTFE Standard

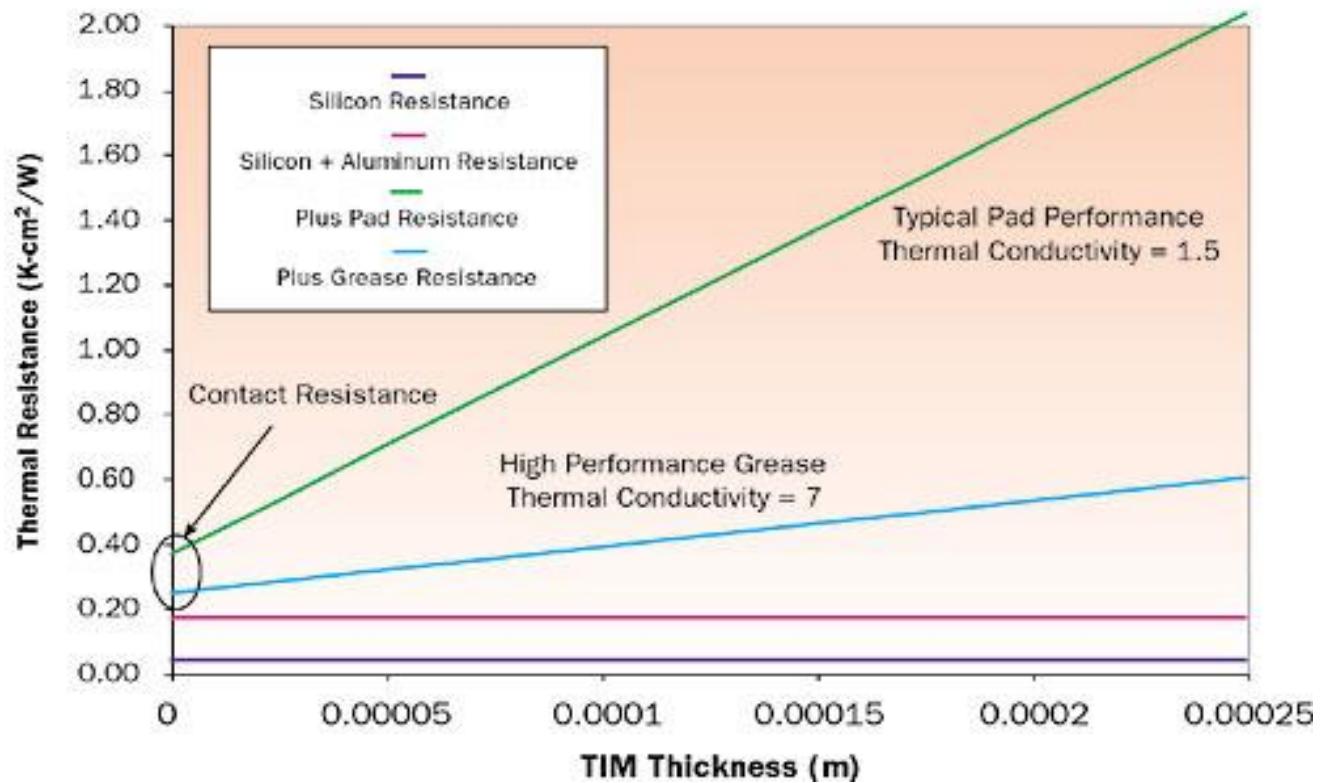

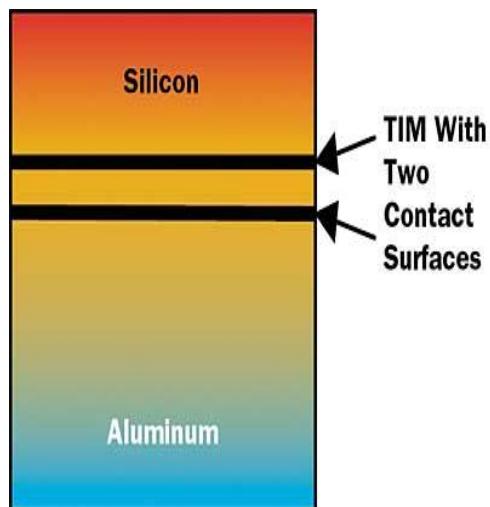

Steady State Measurement

PTFE slice, dia 55mm height 3mm

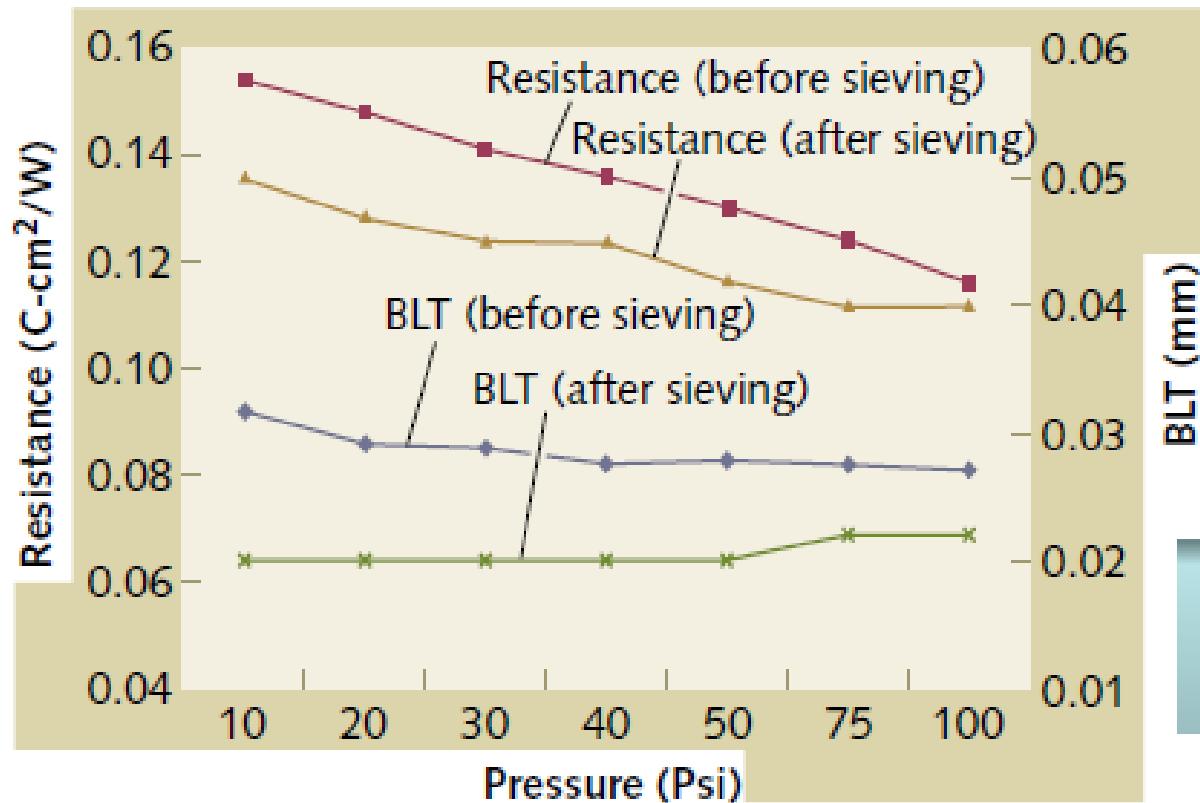

Result: $\lambda = 0.239 \text{ W/m}^* \text{K}$

Measurement of a typical Stack

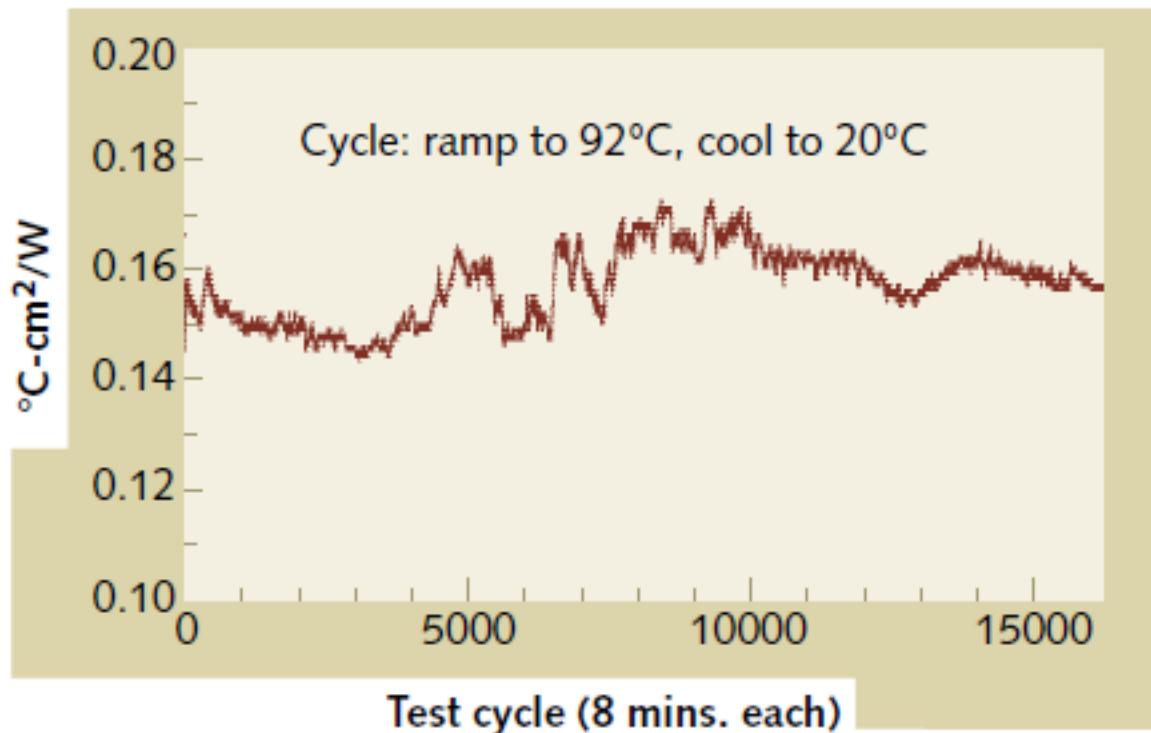

Pressure Dependent Measurements

Polymer Material with Filler
2Filler Particle Sizes

Time Dependent Measurements

Power Cycling Test

**2000 cycles ~ 1 year
under normal operating
conditions**

->Life Time Prediction

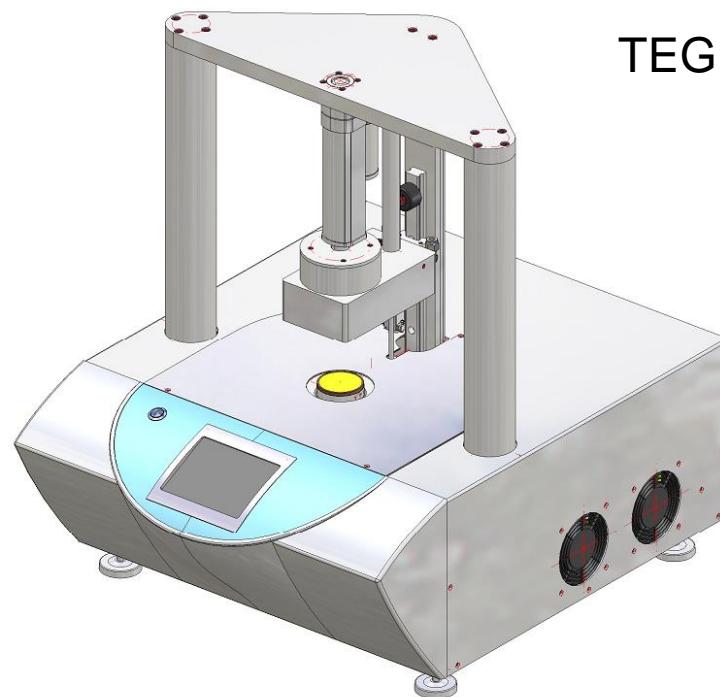

Thermally Conductive Grease

More Applications

Thermal interface materials

- Solid
- Pastes
- Liquid

Thermal conductivity
measurement
